		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Serves as one of the three core courses offered to students in the Communication and Development Studies graduate program during their first semester in the program. Introduces students to key communication theories that have been associated with communication for development practice since World War II. The course examines micro, mid-range, and macro-level theories, connecting those formulations to the various paradigms that have guided development practice by influential international agencies and organizations. The course also isolates for discussion the theory-based competencies required of professionals currently working in the field of communication for development. Thus, the seminar focuses upon theoretical formulations in areas that include behavior change theories, social learning theory, social cognitive theory, and interpersonal communication. It also covers mass communication theories that have particular relevance to communication for development, including theories of media dependency, cultivation, and media effects. Furthermore, students are introduced to other key issues and theories related to the field, including diffusion of innovations and entertainment-education. In short, the course focuses on the theoretical competencies required of Comm Dev students to be successful in their eventual academic and/or professional careers.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		This course serves as one of the three core courses required for students in the Communication and Development Studies graduate program during their first semester. It introduces "Comm Dev" students to basic principles associated with conducting graduate level research, with some focus on key research considerations related to the field of Communication for Development. With that in mind, the course covers critical elements necessary for conducting graduate-level, scholarly research more generally, including identifying a research topic; accessing scholarly research; writing a literature review; and research ethics. The students are also introduced to research design, and to qualitative and quantitative methodological approaches to collecting and analyzing data. At the same time, methodological elements that help define Communication for Development as an academic and professional field serve to further inform readings, lectures, and discussions. Course topics with this relatively more specific programmatic focus include monitoring and evaluation; rapid appraisal methods (e.g. mini-surveys, transect walks, and community mapping); and participatory methods (e.g. focus groups and community discussions).

EHS	EDST	EDCS	5010	History & Philosophies of Education	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Examines educational history and philosophy by approaching the two fields as interconnected social moments in a long conversation about the role and purposes of education in the United States. The social practice of education grows out of the explanatory constructs we hold about our history and several philosophical themes relevant to education. Themes include: (a) the various conceptions of human nature, (b) the relationship between the individual and the group or the citizen to the state, (c) the nature of the "good" life, and the nature of knowledge and the processes of knowing. Given that philosophies do not exist and are not created within a vacuum, explores how our history contextualizes the development of our philosophies, that in turn impact the way we develop and carry-out schooling. Also examines select non-western historical and philosophical legacies that impact how education was or was not accessible to historically marginalized peoples.

EHS	EDST	EDCS	5040	Sociology, Politics, and Change in Education	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Education is not a neutral endeavor. It is both a societal enterprise and a localized social activity; as such, it is embedded in an ever changing socio-cultural context. Taken seriously, these two ideas point our attention to several sociological and political questions about education such as, What is the purpose of education? Who benefits from education as it is constituted? Who decides curriculum, structure, funding, etc.? What are the implications for any given educational setting? Who is marginalized by the way we "do" education in the U.S. context? What does educational change look like? Is change possible in U.S. schools, and if so, in what manner? Critically examines the complex interactions of societal structures and political ideologies as they intersect, influence and impact educational realities in U.S. public schools.

In addition to leading students through a self-examination of their own assumptions and beliefs surrounding diversity, explores historical events and legal cases related to diverse students in schools; theories of identity and culture and how these theories impact constructions of diversity and multicultural education; and strategies for effectively engaging issues of diversity in educational contexts. Offers an opportunity to engage in diversity education in the larger community through a service learning experience.

As a theory-based course, interrogates the social, cultural, and philosophical contexts of education. Focuses on relational/caring theory and other alternative educational theories that promote holistic education, home or open schooling models, arts, environmental, nature, and spirituality based education. Ultimately examines the connection between interpretations of the human condition and education.	Seminar	4	0		N	G50		0
EHS	EDST	EDCS	7010	The Social and Cultural Contexts of Leadership GEC4: A-F, REQUISITE: CR, PR COURSE DESC: Examines the concept of leadership as perceived and constructed in the United States based on the traditionalist conception of what leadership is and should be universally, that is, the Western canonical paradigm. The existence of leadership outside the Western cultural canon and the discourse that elicits the critical-cultural and social construction of leadership is scarce and, in many instances, noticeably absent. Examines leadership studies first, by investigating the cultural foundations of leadership; second, by investigating the cultural production of leadership and its significance from a social critical theoretical context; and third, vets leadership from a non-traditionalist (non-Western) historical perspective. Leadership and its development is both a social construction grounded in the cultural historical context that produces it; hence, all leadership is inherently critically cultural. Contextually all leadership is a social, cultural, historical construction (thus political) by the nature of who the leader is and what leadership paradigm they employ. Investigates this dynamic and the critical discourse in leadership studies referred to as transformational leadership.	Seminar	4	0		N	G50		0
EHS	EDST	EDCS	7020	The Moral and Ethical Dimensions of Leadership GEC4: A-F, REQUISITE: CR, PR COURSE DESC: Provides opportunity to engage in a broad exploration of the moral and ethical dimensions of leadership as it applies to various educational and community settings. Assumes that leadership extends beyond traditional roles and models of leadership. Examines how people who consider themselves leaders and or change/agents recognize and make moral and ethical decisions in their practice. The discipline of Western philosophy has developed multiple moral frameworks in an effort to explain how and why we make moral and ethical decisions and/or what guidelines we might rely upon in doing so. In addition, developmental psychology has also paid attention to the stages of moral development and reasoning for the same purpose. It is worthwhile to be familiar with these philosophical models, and at the same time be aware that most people make moral and ethical decisions drawing upon multiple rationales, cultural value sets, and contexts. Examines the serious import of understanding oneself and one's moral and ethical living and decision-making, given the depth of impact of moral and ethical decisions in people's lives. EHS	EHS	PCOE	2301C	Building Leadership in Adolescent Girls through Mentorship	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Youth mentoring programs have proliferated in recent years. This course identifies why mentoring programs have become popular tools to promote self-esteem amongst adolescents, as well as what effective mentoring looks like. In this service-learning course, students have the opportunity to be paired with local area middle school 7th and 8th graders and Ohio University's Women's Center to conduct the Young Women's Leaders Program. This program has a gendered focus in looking at the experiences of women but is open to anyone who believes they would benefit from a program with that lens. If students would like to be considered as a mentor, they are required to complete both a BCI and FBI background check. The fee for this totals \$62 and should be paid for by the student. Additionally, the service learning requires that students continue mentoring at the middle school through the spring term on Wednesdays (3:05-5:05), though they will no longer be enrolled in the course. For those unable to commit to that service learning, there is an alternate service learning option that will enable students to create workshops that may be used with parents of those in the Young Women Leaders Program. In addition to information on mentoring generally, this course takes a gendered approach to understanding the particular challenges that adolescent girls face both within and outside of school. This is a designated service-learning course.

Critical properties such as waveguide loss, mode coupling, material loss, power flow, anti-guiding, coupling to optical fibers, and device fabrication will all be covered. In addition, to get a better understanding of the operation of these circuits, students will be required to simulate many of these structures using Matlab throughout the course. In the second part of the course, we extend this analysis to specific devices and practical applications. Modulation of the optical field through acousto-optic and electro-optic effects is studied, as well as the current technology of these structures. Light detectors are presented, focusing on the theory of light-matter interaction and operation of various light detection systems. ENT	EECS	EE	7183	Reinforcement Learning	Lecture	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		This course will provide a comprehensive introduction to reinforcement learning as an approach to artificial intelligence, emphasizing the design of complete agents interacting with stochastic, incompletely known environments. Reinforcement learning has adapted key ideas from machine learning, operations research, psychology, and neuroscience to produce some strikingly successful engineering applications. The focus is on algorithms for learning what actions to take, and when to take them, so as to optimize long-term performance. This may involve sacrificing immediate reward to obtain greater reward in the long-term or just to obtain more information about the environment. The course will cover Markov decision processes, dynamic programming, temporal-difference learning, Monte Carlo reinforcement learning methods, eligibility traces, the role of function approximation, and the integration of learning and planning. The course will emphasize the development of intuition relating the mathematical theory of reinforcement learning to the design of human-level artificial intelligence.								
				"Reinforcement learning is learning what to do---how to map situations to actions---so as to maximize a numerical reward signal. The learner is not told which actions to take, as in most forms of machine learning, but instead must discover which actions yield the most reward by trying them. In the most interesting and challenging cases, actions may affect not only the immediate reward, but also the next situation and, through that, all subsequent rewards. These two characteristics---trial-and-error search and delayed reward---are the two most important distinguishing features of reinforcement learning."								
				This course will prepare you to study computational principles and hardware organization of what we mean by intelligence and goal-directed behavior. How to motivate machine to act on its own, yet to satisfy a desired objective? How machine interaction with environment leads to better behavior, better understanding, and success in its mission? What are the computational issues in doing this efficiently and in real time?								
ENT	EECS	EE	7213	Cognitive Neuroscience and Embodied Intelligence	Lecture	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		This course considers neurological, psychological, and structural models of intelligence. It uses these models as a basis for discussion and development of new models that may exhibit potential for creating embodied intelligence. The majority of biological intelligence creatures are simple, yet they can achieve complex information processing that current artificial intelligence cannot match. Can we use these simple models to learn how to design better artificial intelligence? Thus this course is a combination of what we know about intelligence with discovery what makes it possible.								
				The emphasis in this course is on the development of the concept of self-organizing, learning neural systems with locally interconnected processing components (neurons and minicolumns). Neural-net implementations of pattern recognition algorithms provide important, practical advantages by allowing fast realization of parallel, iterative procedures. Self-organizing neural networks that implement associative spatio-temporal memories, statistical self-organization and learning, goal creation and goal oriented development of the memory structures will be discussed. An example self-organizing neural system simulating biological systems will be examined.								
				Cognitive neuroscience focuses on understanding how the brain embodies the mind, using biologically inspired models made of neuron-like processing components. This subject lies at a cross-section of neuroscience and cognitive psychology, and involves developing models that illustrate brain functions, observed cognitive phenomena and their behavioral manifestations. These models are used to develop embodied agents that interact with the environment through a physical body that is able to perceive and act on the environment.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	Jr or Sr						
		COURSE DESC:		Approaches photography as a set of problems and concepts rather than as a unified medium with a linear history. Photography is marked by multiple, often contradictory practices at the nexus of differing discursive and contextual parameters. As a result, the main interest is not only with the photograph as an object of study, but as a modality of thinking and a way of producing new models of visibility. We will investigate the criteria used to identify and discuss photographic images and practices over the century and a half since the inception of processes resulting in photographic material. At the same time, we will ask after the ways in which photographic practices elucidate aspects of the historical context from which they are drawn.

FAR	IART	IART	5401	World Aesthetic Ideas	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		The seminar explores the musical-aesthetic thought outside the Western world, from ancient sources to contemporary debates. The readings include mythological, religious, literary, and philosophical texts, both traditional and modern. The areas of musical creativity that will be discussed comprise classical traditions and popular genres, including the uses of music in mass entertainment, ideological propaganda, and devotional practices. Literary, visual, and video materials will help illustrate the attitudes towards music in these cultures. In addition, the seminar will pursue a methodological theme of considerable urgency: Do the existing historical and contemporary approaches do justice to the uniqueness and complexity of music-philosophical theorizing in the cultures of, for example, India, China, or Bali? What kind of an approach would allow us to avoid the pitfalls of comparativism, Orientalism, and distorting biases in general? What kind of a philosophical perspective can assure at once a meaningful multilateral dialogue among world musical cultures, and their resistance to the levelling effects of globalization? A variety of texts, both by authors from a relevant cultural tradition and by Euro-American commentators, will serve as a platform for addressing these questions.

GVS	ES	ES	6850	Capstone: Resilient Infrastructure and Communities	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE: Resilience theory has emerged as an approach for understanding how systems are able to thrive through rapid, often unexpected change. Managing for resilience is key in preparing for some of the greatest challenges that society faces including climate change, globalization, and rapid urbanization. In this capstone, students analyze the risk and vulnerability of a community, organization, or infrastructural system to unexpected change and develop strategies to improve the community or organization's resilience. Students critically evaluate the resilience preparation at a local, state, regional, and national level to highlight both best practices and lessons learned. They then select a system in which they are most interested; infrastructure, urban centers, community plans, ecological systems, organizational, and others. Students engage with organizations and communities to develop a resilience plan for that system with a focus on improving sustainability, human security, and resilience.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		A communications plan is an important part of an organization's daily operation. Additionally, for public and nonprofit organizations in particular, the activities in the plan should support overall communications goals in ways that help raise money, create change, recruit talent, and promote mission-related goals and objectives. As a living document, it frames the way both internal and external audiences perceive the organization; and since many nonprofits have limited staff and financial resources available for communications activities, it is even more important that these resources be deployed as strategically as possible. This course offers an overview of communications concepts and media activities in ways that will help students develop a strategic communication plan focused on emphasizing a commitment to organizational mission; building trust among internal and external audiences; clarifying organizational priorities; and generating public value.

		COURSE DESC:		This course introduces students to fundamental principles of ethical community engagement that begin with an understanding of how first to engage with a community through the identification and elevation of its assets. Students are asked to reflect on their perceptions of communities with which they have no previous relationships, encouraged to interrogate the factors that have influenced those perceptions, and challenged to expand their understanding of those communities through research and engagement with community members. Through that process of self-reflection, students also are challenged to consider ways of engagement that are mutually beneficial to themselves and their community partners. In addition, this class explores the tension associated with navigating structural and cultural differences to find common goals and create partnerships that facilitate the achievement of community partners' missions as well as academic expectations for the students.

			COURSE DESC:	This course introduces students to fundamental principles of ethical research and creative activity. Students are asked to reflect on their perceptions of how research and creative activity contribute to new knowledge and insights, encouraged to interrogate the factors that influence those perceptions, and challenged to expand their understanding of how individuals can ethically contribute to these endeavors through a multidisciplinary perspective. Through this process of self-reflection and peer discussions, students also are challenged to consider ways that their engagement in research/creative activity can be mutually beneficial to themselves, their field, and the greater public. In addition, this class explores the tensions associated with navigating the research/creative process, including interrogating personal, social, and cultural values, applying rigorous, systematic processes, and properly citing/acknowledging others' works to ensure that the knowledge and insights gained are rigorous, ethical, and contribute to the existing body of knowledge.

		COURSE DESC:		The first course of the Open Book Project elective series explores issues of social justice and inclusion in medicine. Grounded in Rita Charon's (2007, 2017) narrative medicine methodology, the Open Book Project elective (OBP1) introduces preclinical medical students to a unique framework for understanding, interpreting and interacting with the lived experiences of others; skills and techniques for empathy building, self-reflection, and connecting to others at a deeper, humanistic level; and an approach to clinical practice in which narrative sensibilities inform how physicians listen to and provide care to their patients. Through practice in the process of close reading, radical listening and expressing our own stories, narrative medicine facilitates relationship building and a deeper understanding of physicians and patients alike. Students will participate in two sessions of Visual Thinking Strategies (VTS) led by staff of the Kennedy Art Museum.

		ELIGIBLE GRADES:		GEC5: CR, PR, F REQUISITE: Permission required and Successful Completion of Year 1 Medical School Curriculum								
		COURSE DESC:		The purpose of this course is to provide an early research experience for students who have successfully completed the Year 1 medical school curriculum. This course will complement the current Patient-Centered Continuum (PCC) and Clinical Presentation Continuum (CPC) curricula currently offered by the College of Osteopathic Medicine. It will also better prepare the students to fulfill future research requirements, such as those in the CORE (Centers for Osteopathic Research & Education) and/or residencies and fellowships. Published research has shown that early research exposure for medical students improves their future attitudes and interest in research (Ley & Rosenberg, 2007), increases their productivity as physicians (Zier, Friedman, & Smith, 2006), better trains medical students to critically assess medical literature (Guillory & Sharp, 2003), and can help to interest medical students in research and academic careers (Solomon, et.al., 2003).

It exposes the student to the breadth of family practice including medical care of all ages, as well as enhances the student's ability to provide continuity in care. This rotation also exposes the student to the collaboration of health care entities in the community, practice, management, practice quality improvement, and possibly research.
